

# SNAKE CAMERA

SNAKE CAMERA is developed for the surveillance missions in caves, vent tubes and indoor areas.

- **SPECIAL FORCES**
  - **LAW ENFORCEMENT FORCES**
  - **COMMANDO UNITS**
- and other military units.

# SNAKE CAMERA

## Features

SNAKE CAMERA is designed in an articulated form and consists of several links that can be easily jointed. Thanks to this design, its maneuverability is improved and gets easier to be carried by disjointing the links.

SNAKE CAMERA, which can enter from narrow places thanks to its thin structure, provides real-time images to the user with a 5" handheld terminal.

Thanks to its IR illuminator, SNAKE CAMERA allows better camera vision in dark environments.

The camera on the tip of SNAKE CAMERA can be rotated in the range of 60° in both right and left directions by the operator; so that surveillance mission can be performed from different angles.

Length	11 meters
Number of Links	19
Weight	3500 g
Camera	90° Color Camera
Lighting	IR LED
Operation Time	1 hour
